

## EVD4E

### Serial to PAL/NTSC Encoder

The EVD4E SDI Encoder provides the lowest cost all-digital conversion of SDI to analogue PAL or NTSC. The EVD4E is useful for monitoring, level and phase checking, dubbing etc. The EVD4E automatically adapts to PAL or NTSC video standards and outputs analogue PAL (625 line inputs) or NTSC (525 line inputs). Pedestal and narrow/wide H/V blanking are user configurable via dip-switches. The EVD4E encodes the full dynamic range of input video. Levels below black and above white are not clipped.
